10. Management Reports

oral

11. Matters from Directors

oral

Closed Session:

Any public reports of action taken in the closed session will be made in accordance with Government Code sections 54950:

Labor Negotiations Section 54957.6

Discussion of current labor negotiations with Teamsters Local 665

ADJOURN Anticipated adjournment is 3:30 pm

Americans With Disabilities Act (ADA) Compliance

The Mendocino Transit Authority complies with ADA requirements and, upon request, will attempt to reasonably accommodate individuals with disabilities by making meeting material available in appropriate alternative formats (pursuant to Government Code Section 54953.2). Anyone requiring reasonable Interpreter services are available for the meeting by calling 707-462-5765, with seven (7) day advance notice.

Mendocino Transit Authority

Board of Directors

Minutes of the Regular Board Meeting September 28, 2016 Fort Bragg video conferenced with Ukiah

Present:

Cross, Doble, Gjerde, Peters, Tarbell

Excused:

Mastin, Strong

Staff:

Butler, Meyer, Meyer

Others:

Ellard

Dir. Tarbell called the Meeting to order at 1:32 PM.

Dir. Tarbell asked for Public Comment

CONSENT CALENDER

Agenda Item #2:

Minutes of September 1, 2016

Agenda Item #3:

Service Performance Report: Spring Quarter 2016 and

June 2016

Agenda Item #4:

Financial Report: Preliminary, June 2016

Agenda Item #5:

Board Meeting Dates and Locations

Agenda Item #6:

Capital Program: Update/Progress Report

Moved by Dir. **Cross** and seconded by Dir. **Doble** to accept Agenda Items #2 - #6, and approved by the following Roll Call vote:

AYES:

Cross, Doble, Gjerde, Peters, Tarbell

NO:

None

ABSTAIN:

None

ABSENT:

Mastin, Strong

Agenda Item #7: Unmet Transit Needs – Willits: Action: Solicit Public Input. No Unmet Transit needs presented.

Agenda Item #8: MTA Advertising Policy. Action: Review and approve MTA Advertising Policy. Adopt Resolution 2016-18. General Manager **Meyer** presented her Advertising Policy to the Board. She reported that bus advertising is an excellent source of additional revenues for MTA, presented a plan to implement this, and recommended approval of **Resolution 2016-18**.

Moved by Dir. **Peters** and seconded by Dir. **Gjerde** to adopt **Resolution 2016-18**, MTA Advertising Policy, and approved by the following Roll Call vote:

AYES:

Cross, Doble, Gjerde, Peters, Tarbell

NO:

None

ABSTAIN:

None

ABSENT:

Mastin, Strong

Agenda Item #9: Mendocino College – Fare Free Rides – Update: Gen. Mgr. **Meyer** reported that the program has been moving along, and more detailed information will be presented at the next meeting.

Agenda Item #10: General Manager Report. Gen. Mgr. **Meyer** stressed that use of Modern Technology would help tighten some areas in Dial-A-Ride to improve service over a paper produced, self-routing practice. The technology would route passengers efficiently, and provide real time information on the location of buses. Additional features allow passengers to locate the bus via an app on their phone. Dir. **Doble** suggested looking into long term contracts and propriety software that may be problematic in the future.

Agenda Item #11: Management Reports: Information.

Maintenance Mgr. **Butler** reported that he received the supplies in for the gate and lighting project in Willits. Fin. Mgr. **Webster** reported that MTA has been continually recruiting for drivers and is understaffed. She also reported MTA will have to hire an actuary in order to obtain the GASB68 data for the audit.

Agenda Item #12: Matters from Directors. Dir. **Doble** reported for the month of December, the City of Ukiah in partnership with the Ukiah Valley Medical Center will have an Ice Skating Rink downtown.

The Regular meeting of the MTA Board of Directors adjourned at 2:20 pm.

Jim Tarbell, Chair Sally Webster, Finance/Pers. Mgr.

To: MTA Board of Directors

From: Carla Meyer, General Manager

Date: October 26, 2016

Subj: Service Performance Report: August and Summer Quarter, 2016

Attached is the Quarterly Report for Summer, 2016 (June, July, August), plus the usual monthly report which compares performance in August 2016 with the three (3) previous months and August, 2015. Performance of the MTA services for the Summer Quarter exceeded standards in eight (8) of the twelve (12) measures. Data for the Senior Centers has yet to arrive.

Performance in the month of August, 2016 exceeded or equaled five (5) of the twelve measures. Compared to August, 2015, performance improved for only two (2) of the twelve measures.

Also attached is a year-to-date summary of statistics and performance measures by route, with subtotals by service type. Due to month-to-month fluctuations, this year-to-date summary is more meaningful than the monthly reports.

Fare Revenue	Up	7.6%
Ridership	Down	-12.3%
Service hours	Down	05%
Total operating cost	Down	-3.1%

That means that compared to last fiscal year after August (two months):

Cost per hour (hourly rate)	Increased	3.7% to \$84.53
Productivity (passengers per hour)	Decreased	7.5% to 6.6
Farebox ratio	Increased	13.7% to 14.3%
The average fare paid	Increased	22.7% to \$1.83

August's data shows an increase in the Farebox Ratio and average fare paid, however, ridership continues to decrease while Cost per Hour increases. It is hopeful that the expanded service between Mendocino, Ft Bragg-Ukiah and the ongoing Mendocino College Free Fare Program will slow this trend. MTA is also beginning development of a new five-year plan with particular emphasis on Marketing and Public Relations.

Agenda Item#4

To:

Board of Directors

From:

Sally Webster, Finance & Personnel Manager

Date:

October 25, 2016

Subj:

Preliminary Financial Statements as of August 31, 2016

Attached are Financial Statements for the month ending August 2016. The Income Statement shows a gain of \$22,808, with a \$16,247 variance. Comparing year-to-date through Aug 16 to Aug 15: Operating Revenue is up \$9,076 (6.7%). Other Revenue is up 1.5%. Operating Expenses are up 3.3% as compared to the previous year. Our total operating expenses compared to our budget are down 10.4% overall.

The Capital Income/Expense Statement reflects a \$48,287 gain this month. For further details to the capital program, please see Agenda Item #6.

There is still year-end work to be done. Changes will be made to accounts depending on the outcome of the actuarial reports and adjustments to the Balance Sheet.

To:

MTA Board of Directors

From: Carla Meyer, General Manager

Date: October 26, 2016

Subj: Capital Program: Progress Report

This report is consistent with the capital budget dated June 2015

2015/16 Projects

Current Budget

Bus Stop Improvements (Other)

\$49,500

New Action: Additional stops have been approved and upgraded.

Problems: None.

Two Senior Center Vehicles (5310)

\$129,161

New Action: Willits Vehicle was accepted in March 2016 and is now in service.

Van for Ukiah arrived in August 2016 and is now in service.

Budget was carried over to FY 2016/17

Problems: None

Two Medium Duty Buses (5311f)

\$346,080

New Action: Projected completed.

Problems: N

None.

Four Large Vans (Prop 1B and STIP)

\$358,320

New Action: Project completed.

PROBLEMS: None.

Two-way Radio Replacement incl. Dispatch Console (Prop 1B and STA)
\$125

\$125,000

New Action: Video project was carried over to FY16/17 and is now complete.

The radio project is ready to roll early next fiscal year pending

approval of the FY14/15 Safety and Security funding.

Cal-OES staff has notified MTA that project grant meets eligibility,

Awaiting 'Notification of Payment'

PROBLEMS: None

Maintenance Service Van (STA)

\$50,386

New Action: Project will be carried over to FY19/20.

Problems: None

THE PACE THE PARTY OF THE PARTY

Agenda Item #7

To: MTA Board of Directors

From: Sally Webster, Finance & Personnel Manager

Date: October 25, 2016 Subj.: Unmet Transit Needs

As you know, MTA collects the Unmet Transit Needs submitted in a variety of ways during the fiscal year. We began the FY17/18 Unmet Transit Needs at our December 2015 meeting.

Unmet Transit Needs identified thus far:

- Daily service to Wildwood Campground, east of Hwy 1 on Hwy 20
- Solar Powered Transit Center with Electric Vehicles on the old Masonite Property
- More Service on the South Coast
- Restore old Coaster Service to and from Mendocino
- Add more service to Anderson Valley from Ukiah
- Move the "Colombi" stop at the intersection of Harold and Oak street in Fort Bragg to Oak Street between Park and Harold.
- Service to/from Burke Hill Road in Ukiah
- Local 9 Service on Sundays
- Dial-A-Ride to Calpella
- ➤ Additional trips to Willits and back
- Additional litney trips
- Local 9 Saturday Service later in the day
- Bus Stop in front of Henny Penny or the Post Office

We were able to meet three of the Unmet needs with the award of the 5311(f) grant, which was daily service to Wildwood Campground, additional Coaster Service to and from Mendocino, and additional trips to Willits and back. This new, expanded service began on Sunday, October 23, 2016, and adds daily service from Mendocino to Santa Rosa, as well as two round trips from Fort Bragg to Ukiah and back. Additionally, we were able to place a Bus Stop in front of the Post office in Ukiah.

Staff Recommendation:

Solicit public input for any Unmet Transit Needs for Point Arena and/or other areas of the County. Add any unmet transit needs to the list.

To:

MTA Board of Directors

From:

Carla A. Meyer, General Manager

Date:

October 26, 2016

Subject:

Application for FY14/15 Prop1B Safety and Security Funds

Proposition 1B made available statewide \$900,000,000 in bond funds over ten (10) years starting in FY 07/08 to improve transit safety and security. Because MTA is the only transit agency in Mendocino County the entire \$80,487 is available only to us.

At the June, 2016 Board of Directors meeting, the Board approved Resolution 2016-16, authorizing the General Manager to apply for FY 2014-15 Safety and Security Grant Funding for replacement of the current failing radio system.

Proposed project:

- 1. Purchase and install 51 Digital Radios in the MTA Fleet.
- 2. Purchase 10 mobile handheld radio units.
- 3. Purchase and install two (2) digital repeaters.

The Maintenance Division has been working with Fisher Communications for approximately three (3) years. To date, Fisher Communications delays the MTA project for one-three months at a time. Unfortunately, at this time, we see no end date in sight.

In order to improve efficiencies in the Dial-A-Ride division, Computer Aided Dispatch software (CAD) is required. In addition, future modules can be added (upon grant funding securement) to provide fixed route AVL, more effective routing and ridership apps for bus arrival/departure times.

MTA has two more cycles of Safety/Security Funding available. The FY 2015-16 call for projects is anticipated in the next six (6) months at which time MTA can reapply for the radio system project. MTA can request a Corrective Action Plan for the current funding award for purchase of the CAD software.

Recommendation: Review, approve and adopt Resolution 2016-17, authorizing General Manager re-apply for FY 2014-15 Safety and Security funds for Computer Aided Dispatch System.

SERVING MENDOCINO COUNTY SINCE 1976

RESO #: 2016-17

WHEREAS, the Highway Safety, Traffic Reduction, Air Quality, and Port Security Bond Act of 2006 authorizes the issuance of general obligation bonds for specified purposes, including, but not limited to, funding made available for capital projects that provide increased protection against security and safety threats, and for capital expenditures to increase the capacity of transit operators to develop disaster response transportation systems; and

WHEREAS, the California Governor's Office of Emergency Services (Cal OES) administers such funds deposited in the Transit System Safety, Security, and Disaster Response Account under the California Transit Security Grant Program (CTSGP); and

WHEREAS, the Mendocino Transit Authority is eligible to receive CTSGP funds; and

WHEREAS, the Mendocino Transit Authority will apply for FY 2014-2015 CTSGP funds in an amount up to \$80,487 for Computer Aided Dispatch Software; to protect sensitive client data and further aid the local emergency services evacuate vulnerable residents of Mendocino County in the event of an emergency; and

WHEREAS, **Mendocino Transit Authority** recognizes that it is responsible for compliance with all Cal OES CTSGP grant assurances, and state and federal laws, including, but not limited to, laws governing the use of bond funds; and

WHEREAS, Cal OES requires **Mendocino Transit Authority** to complete and submit a Governing Body Resolution for the purposes of identifying agent(s) authorized to act on behalf of **Mendocino Transit Authority** to execute actions necessary to obtain CTSGP funds from Cal OES and ensure continued compliance with Cal OES CTSGP assurances, and state and federal laws.

THEREFORE, IT IS HEREBY RESOLVED BY THE BOARD OF DIRECTORS OF THE MENDOCINO TRANSIT AUTHORITY THAT CARLA A. MEYER, GENERAL MANAGER AND/OR SALLY WEBSTER, FINANCE AND PERSONNEL MANAGER, is hereby authorized to execute for and on behalf of Mendocino Transit Authority, a public entity established under the laws of the State of California, any actions necessary for the purpose of obtaining financial assistance provided by the California Governor's Office of Emergency Services under the CTSGP.

ADOPTION of this **RESOLUTION # 2016-17** was MOVED by Director and SECONDED by Director at a regular meeting of the MTA Board of Directors on d this **26**th day of **October, 2016**, by the following roll call vote

1.0 INTRODUCTION

RouteMatch Software is pleased to submit the enclosed proposal documents to Mendocino Transit Authority for a Demand Response Management and Mobile Data system. RouteMatch is dedicated to the success of our clients and has been established around a philosophy of building state-of-the-art technology and professional services, while providing unparalleled customer support and maintenance. We conduct business as a partnership with our clients, working in tandem with them to provide the best solutions possible. We will always back our products with the best service and support in the industry.

RouteMatch Software is proposing RouteMatch Demand™, the industry leading solution for the planning, optimization, and management of a demand response or paratransit service. From customer registration through transport verification, the RouteMatch Demand™ solution provides an end to end demand response management system that truly models your operations workflow. RouteMatch Demand™ is comprised of multiple modules that model a demand response operations workflow. System provides easy to use components to manage your customers, driver, vehicles, reservations, schedules, dispatch, billing, reporting, and much more.

Fundamental to the system is the **RouteMatch Mobile Data System**, utilizing cost-effective tablet computers to provide automated vehicle location and mobile data communications, including electronic manifests, 2-way communications, configurable data collection and navigation.

RouteMatch understands importance of a successful deployment of a supported solution. The RouteMatch Implementation Methodology (RIM) is a proven, pragmatic and adaptable implementation methodology that capitalizes on our collective experience with Go Lives at over 600 locations. This internally developed methodology takes into account the proper staffing to meet the client's timelines and the proper procedures and documentation results in a successful implementation of our systems. Our Customer Support & Maintenance Program provides a live 24/7, U.S.-based Support Staff, and includes all product upgrades and updates to protect your investment and ensure that Mendocino Transit Authority is using cutting-edge technologies.

We are truly excited about the chance to partner with you on this important and strategic project. Please do not hesitate to contact me with any questions or concerns.

Regards,

Teague Kirkpatrick
RouteMatch Software

2.0 ROUTEMATCH QUALIFICATIONS

Proven Transit ITS Solutions

RouteMatch is exclusively focused on providing advanced Intelligent Transportation solutions to the public and private sectors. This includes a full suite of fixed-route and paratransit software applications along with integrated peripheral hardware and software applications to complement the technology. We are the leading supplier of integrated mobile data deployments across North America. Our experience and depth in complex and technical systems integration is unparalleled.

These solutions include Mobile Data Computer, Automatic Vehicle Location, Web Portal Solutions, Brokering Solutions, Passenger Information Solutions, Automated Passenger Counting Solution, and Automatic Voice Annunciation and signage solutions. Our team is comprised of more than 150 software engineers, computer scientists, database management professionals, and transportation operations consultants. Dedicated to the success of its clients, RouteMatch Software is guided by a vision of building state-of-the-art technology while providing unparalleled professional services, customer support, and maintenance. RouteMatch has provided a phased approach to our proposal that provides a flexible model for choosing technologies and options that are most advantageous to Mendocino Transit Authority.

Unparalleled Experience & Qualifications

RouteMatch is one of the largest and fastest-growing U.S.-based providers of Intelligent Transportation Systems. We have deep experience in tackling transit agencies' multi-faceted technology, operational, fiscal and client support needs. While RouteMatch has a comprehensive set of scalable technologies built on advanced algorithms, we firmly believe technology and people go hand in hand. RouteMatch clearly understands the importance of experience, proper communication, and execution. This experience becomes even more important when integrating different types of technologies.

Strategic Project Team & Implementation Approach

RouteMatch Software has institutionalized a standard, proven implementation methodology that capitalizes on our collective experience with Go-Lives at over 600 locations across the USA. This internally-developed methodology, RIM (RouteMatch Implementation Methodology), has evolved through the hundreds of installations that we have completed. RIM takes into account the proper staffing to meet the client's timelines, and the proper procedures and documentation results in a successful implementation of our systems. RIM fundamentals include teamwork, structured client involvement, and discrete, linear stages with concrete deliverables. Each stage has clearly-defined goals, as well as designated roles and responsibilities for, both the client's and RouteMatch Software's, project teams.

Annual Verizon Data Plan (10MB) for 10 Devices	\$720
TOTAL	\$9,470

3.2 NOTES & ASSUMPTIONS

- 1. RouteMatch will invoice goods and services as they are delivered.
- 2. This is a cost proposal, requested by and provided to Mendocino Transit Authority. It is based upon the information known to RouteMatch Software, Inc. at the time of this proposal and is subject to change in the event of material differences in the information used to form the proposal.
- 3. All use of cellular data is subject to RouteMatch's current Cellular Data Use Policies. Copies of the applicable policies are available upon request. Licensee is responsible for all fees associated with Cellular Data usage which exceeds the indicated amount. The limitations of warranties and liability included within the Software Enduser License Agreement between the Parties apply to this proposal, and RouteMatch does not guarantee that the Cellular Data will be available at all times or at any particular time.
- 4. All on-going fees are subject to increase after Year 2, provided that such fees may not increase by more than 10% per year.
- 5. Pricing is valid for 90 days.

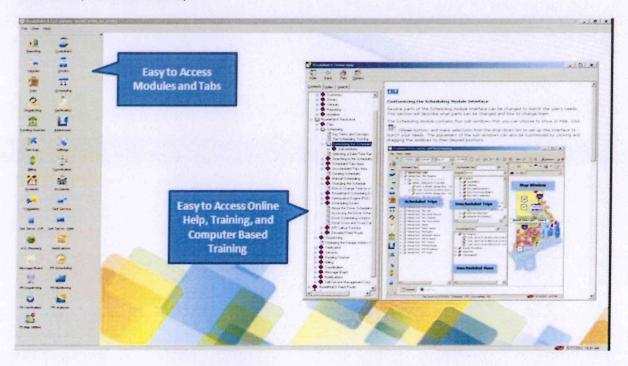

4.0 ROUTEMATCH DEMAND PRODUCT DESCRIPTION

RouteMatch Demand™ is the industry leading solution for the planning, optimization, and management of a demand response or paratransit service. From customer registration through transport verification, the RouteMatch Demand™ solution provides an end to end demand response management system that truly models your operations workflow. Designed from the ground through feedback from our customers and the industry, our solution provides the most usable, practical, and cost effective system for the Demand Response sector. Since one size does not fit all, easily configure the solution to meet your organization's exact needs and processes.

RouteMatch Demand™ is comprised of multiple modules that model a demand response operations workflow. System provides easy to use components to manage your customers, driver, vehicles, reservations, schedules, dispatch, billing, reporting, and much more. RouteMatch Security Policies allows each user to be assigned to a group with specific roles and permissions for control over accessibility and data security.

4.1 DAILY OPERATIONS

4.1.1 Trip Reservations Module

RouteMatch Software streamlines the transportation reservation process quickly and easily through the Trips Module. Users can quickly search for customers and reservations. Customers' trips can then be viewed in the "Trips" window. At this point, any trip can be modified or deleted. Buttons on this form, such as "New Trip" and "Reverse Trip," speed up the data entry function of the reservation. Once vital trip information is collected, reservationists can schedule the trip online using computer-assisted technology. Integrate the RouteMatch Self Service Phone and Web Modules to allow customers to access reservations themselves to confirm, cancel, or create reservations over the phone or website.

Improve Your Reservation Process

- Streamline Reservation Process
- Standing Order and Subscription Management
- Trip Edit Audit Logs
- Appointment Verification

Eligibility Compliance

- Trip by Trip Eligibility
- Conditional Eligibility Tracking
- Trip Negotiation
- ADA and Medicaid Gatekeeping and Process Auditing

Computer Assisted Scheduling and Assignment

- Automated Schedule and Route Assignment
- Online Computer Assistance
- Least Cost Provider Assignment
- Coordinated Trip Assignment

Multi Modal Integration

- Leverage local, commuter, express, and intercity fixed route options
- Demand to Fixed Route Integration
- Transfer Connection Protection
- Supports Flex Deviation
- GTFS and Real Time GTFS Support

Call Center Automation and Web Access Options

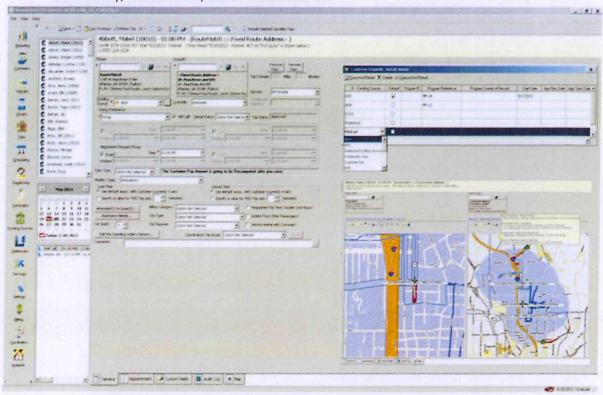

- Automate Call Center Communications and Workflows
- Monitor, Collect, and Analyze Call Center Contact Statistics
- Supports Customer Trip Alerts and System Notifications
- Integrate the RouteMatch Interactive Voice Response (IVR) to improve call center operations and customer service

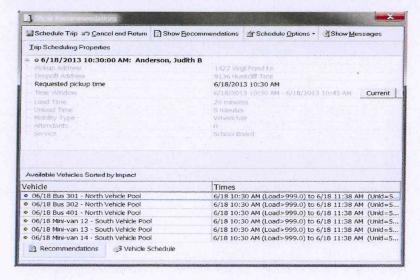

One Call One Click

- Easily expand your call center to a one call one click one stop shop
- Integrate advanced telephony, interactive voice response (IVR), automated call distribution (ACD), and regional coordination
- Integrate RouteMatch Customer, Facility, and Provider Web Portal to offer web-based accessibility, coordination, and customer service!

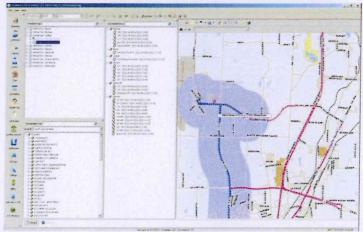

4.1.2 Demand Scheduling Module

RouteMatch has a robust and unique approach to Routing, Scheduling, and Optimization. We provide the most flexible and powerful user interface, work flow, scheduling engine in the industry complemented with a multi-modal approach that looks at multiple services to find the correct scheduling options for stops. Route Optimization is easily and automatically incorporated into your demand response scheduling, monitoring and dispatching systems, all of which are built into the same system and database.

The RouteMatch Demand Scheduling Module is the main workspace for all activities and tasks associated with building, editing, and optimizing your operations schedules and routes. This component provides all necessary route planning tools to:

- Optimize Vehicle and Driver Schedules
- Use RSE Profiles to custom tailor your schedule process
- Easily adjust schedule rules and parameters through RSE Schedule Profile Manager
- Automatically Build Routes and Driving Directions
- Prioritize trips and services using Selective Optimization Tools
- Search and Filter Trips, Runs, and Services
- Efficiently Assign Drivers
- Define Rigid or Flexible Breaks
- Maintain and Manage Runs
- Utilize RouteMatch Schedule Exceptions to quickly identify and fix potential schedule issues
- RouteMatch Schedule Statistics provides planned schedule and route Key Performance Indicators (KPI's) to ensure your schedule meets your operational goals

Our schedule and route optimization engine, RouteMatch Scheduling Engine™ (RSE), to automatically generate the most efficient, realistic schedules and routes. This allows our users to enhance their internal routing and scheduling processes. We exclusively own the technology and continuously build enhancements to the innovative technology.

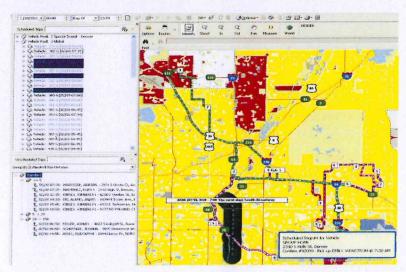

The scheduling and routing technology is built using RSE™ on advanced technologies to automate, assist, and optimize our client's route management processes to produce unparalleled results. RSE™ is a set of GIS-based scheduling and routing algorithms and heuristics that provides a very accurate, efficient solution for fully automated scheduling, routing, and optimization. Although the details of RSE are a trade secret and must be kept confidential, the system is comprised of multiple scheduling algorithms and heuristics that factor in over one hundred (100) configurable variables to affect schedule and route production. The variables generally consist of:

- Global Scheduling Strategy Variables
- Travel Time Manipulation Variables
- Stop Clustering Variables
- Load Variables
- Continuous Optimization
- Human-based decision support
- Vehicle Capacity Variables
- Vehicle Operating Costs
- Driver Break Variables
- Driver Assignment Rules
- Sorting Variables

RSE provides a robust, automated scheduling and routing solution for the automation and optimization of your scheduling process. Unlike the traditional "triangulation" method, which plots two points on a map and draws a straight line between them with a "fudge factor" to calculate travel times, RouteMatch's advanced scheduling and routing algorithm uses real-world street conditions (i.e. speed limits, congestion, one way streets, etc.) to calculate very accurate, efficient schedules and routes using Geographic Information System (GIS) street data. This flexibility also makes it easy to schedule and route field trips, transportation to programs or sporting events, or for summer transportation activities. RouteMatch technology was built to manage thousands of trip optimizations daily or in real-time, which provides our customers flexibility to create the most effective and efficient routes and schedules possible.

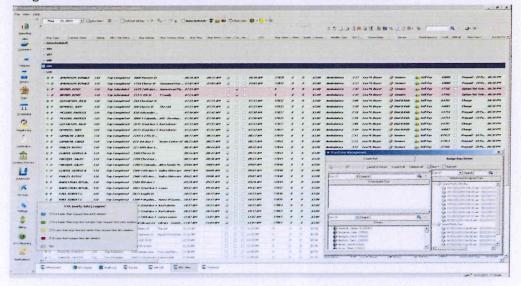

4.1.3 Real-Time Dispatch Module

RouteMatch Software's dispatching module is specifically designed to allow dispatchers quick access to schedule, trip, and customer information in order to improve daily operational decision-making. The component is very flexible; dispatchers can create and design "Data Views" that are specific to their dispatch needs. This allows each dispatcher to have a custom screen that specifically meets the type and mode of dispatch they use

- Dynamic Dispatch Management
- Continuous Dispatch Optimization and Schedule Modification
- No Show and Late Cancellation Management
- Rules Based Alert Engine
- Customizable Dispatch Views and Configurations
- Accurate Estimated Time of Arrivals
- Real Time Trip Status for all Your Customers
- Monitor and Manage Your Fleets On Time Performance
- Monitor and Manage Incidents, Accidents, and Same Day Performance Issues
- Same Day Trip Assignment
- Sort and Group Daily Operations
- Will Call Management
- Integrated Mapping and Geospatial Viewing
- Format and Filter Operational Data for Quick Access
- Computer Assisted Dispatching Tools
- Same Day Run and Driver Management
- Quick Trip Lookup for Improved Customer Service
- Integrate the RouteMatch Mobile Data System (RMMDS) for real time vehicle tracking, messaging, alerting, and data capture.
- Integrate the RouteMatch Notification Module for real-time vehicle

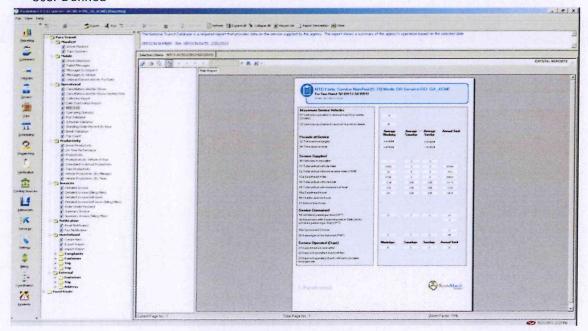

4.1.4 Reports & Analysis

RouteMatch Software integrates state-of-the-art reporting and data analysis tools into all of our products. RouteMatch Demand provides over fifty standard reports covering major operational and planning areas. The RouteMatch Ad Hoc Report Wizard is also included. This easy to use wizard provides a step by step approach to building and editing any report. RouteMatch utilizes flexible user driven front ends to customize and configure each standard report. Due to the open nature of RouteMatch's architecture and open database, all standard, customized, and ad hoc reports are exportable into any ODBC-compliant program (i.e., MS Access, MS Excel). For the purposes of merging reports with other data not captured in the RouteMatch system, our export functionality provides the ultimate flexibility in owning, manipulating, and understanding data that the agency maintains. The Settings Module allows system administrators to define reporting rules and calculations, as well as, assign user permissions to users in the organization.

Major Reporting Areas for Demand Response Transport:

- Manifests
- Mobile Management
- Operational
- Productivity
- Invoices
- Notifications
- User Defined

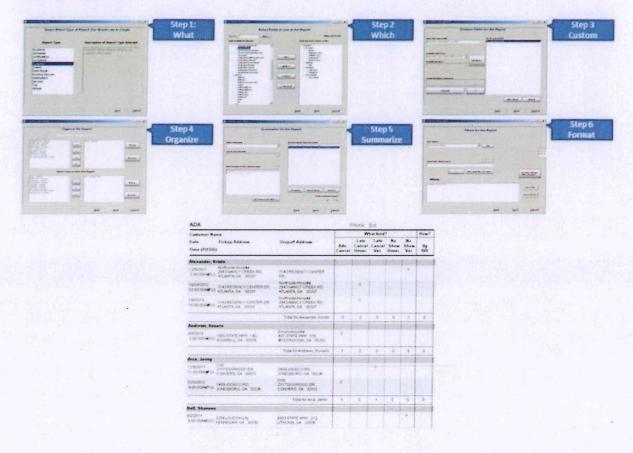

Ad-hoc Report Generator

RouteMatch Software incorporates a wizard-driven, ad hoc report generator that makes building custom reports very simple. Users can simply select the type of report, the information they would like to see, and how it should be filtered, sorted, and titled. The report can then be saved as a public or private report for future use. This feature allows users to build an unlimited number of reports with no assistance or additional fees to RouteMatch. In addition, any custom fields that are utilized to capture information not inherently captured in the solution are accessible for reporting purposes through the ad hoc report generator.

4.2 MOBILE DATA SYSTEM

The RouteMatch Mobile Data System supports multiple mobile data devices (MDD) and wireless communication protocols, combining best-of-breed hardware and software components to meet unique operational requirements. RouteMatch is proposing the a ruggedized Android-based tablet computer as a driver interface device. This crisp and flexible device models the workflow for drivers, electronic manifest as well as other features like, turn-by-turn voice annunciated directions, automated odometer / mileage collection, fare collection, passenger counting, ETA to next stop, and a mailbox for electronic communication with dispatch.

RouteMatch feels strongly that our Commercially Available, Off-the-Shelf (COTS) Approach is superior to our competitors generally and especially for this unique project:

- Commercially Available, Off the Shelf (COTS) technology
- Low cost of maintenance and replacement
- Flexible and Portable for multiple in vehicle applications i.e. pre and post trip inspections
- Supports Fixed Route, Demand Response, and "Mixed Mode"
- "Mix and Match" devices within same AND across multiple Fleets to meet All Operational Needs
- Leverage continual development of mobile tablet and 3rd party mobile application development

4.2.1 Tablet-based Mobile Data Device

Through significant advancements with consumer mobile tablet computers in recent years, RouteMatch is able to deliver a fully functioning Mobile Data Computer at a fraction of the up front and on-going cost. The mobile device serves as the point of interface for the driver, and manages and streamlines the driver experience as well as automates data communications between the driver and dispatch. The mobile data device (MDD) will be a Fully-Ruggedized Android device with a fully functional touch screen specifically designed (at various levels) for the rugged, demanding transit environment. This device will be integrated into the VLU, and will power when the vehicle is powered on. The device will installed within comfortable reach of the driver and will be securely mounted to the interior as to not obstruct the driver or interfere with other on board equipment.

4.2.2 RMMobile Software

The RM Mobile Application supports multiple mobile data devices (MDD) and wireless communication protocols. The mobile device serves as point of interface for the driver and manages and streamlines the driver experience and automates data communications between the driver and dispatch. Our internally-developed Android-based software application resides on the MDD, and models the workflow for drivers, providing a single sign on to multiple peripherals and electronic manifest as well as other features like, turn-by-turn voice annunciated directions, automated odometer / mileage collection, fare collection, passenger counting, ETA to next stop, and a mailbox for electronic communication with dispatch.

The RMMobile Application is extremely flexible and configurable to each participating agency. Factors to be decided are:

- Frequency of AVL Polling configurable based on operational requirements
- Type of Manifest Fixed Route Only, Demand Response Only, "Mixed Mode"
- Auto Clear Fixed Route Stops
- Configure Canned Messages
- Configure Personality of Trip Insertions pop up, acknowledge, etc. (Mobile Messaging)
- Manual Collection of Passenger Counts, Passenger Types, Fare Types
- Display of Schedule Adherence Info
- Design Auto Alerts to Send to Device

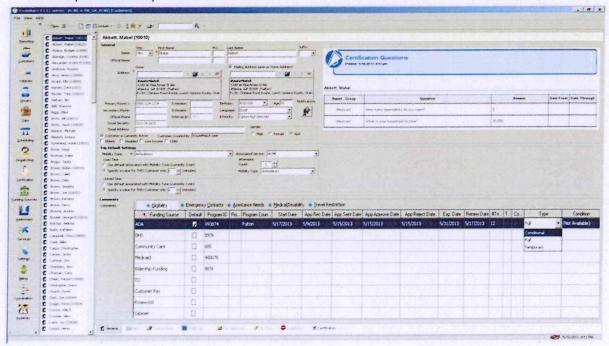

4.3 DATA MANAGEMENT

4.3.1 Customer Module

The Customer Management Module is dedicated to tracking and maintaining all pertinent data for each customer and automating many of the common workflows associated with this process. This module easily manages all of your customers' demographic, ridership statistics, eligibility, ADD program, Medicaid program, and related information. Easily search and find all customers to access data quickly. It also allows you to easily access this data via standard and ad hoc reporting tools to build enterprise customer reporting tools. User-defined custom field forms allow organization to customize data management needs unique to your needs. Below are the major functional areas:

Easily Manage:

- Customer Demographics
- Address and Location Information
- Mobility Management Needs
- Favorite Addresses and Trips
- Program Eligibility
- Medical and Disability Information
- Detailed Audit Logging
- User Defined Custom Fields
- Suspension Policy

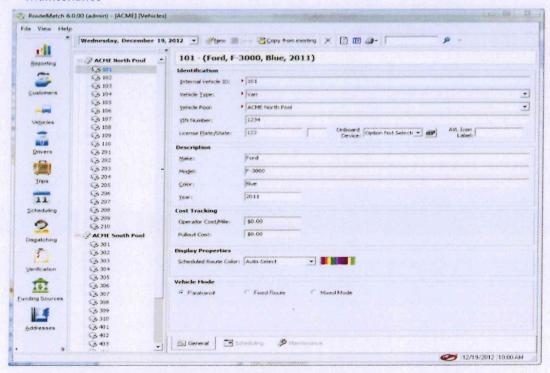

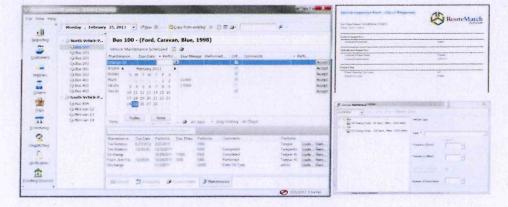

4.3.2 Vehicle Module

RouteMatch Software incorporates a Vehicle Management, Maintenance, and Inspection solution to manage each vehicle fleet or pool. The RouteMatch Vehicle Management component manages general vehicle information, as well as more advanced information necessary to perform automated scheduling and routing functions such as capacity, flip seat configuration, availability, and first in last out (FILO) requirements. Extend your vehicle management system with the RouteMatch Vehicle Inspection system for increased benefits. Utilize the module Tabs to access different vehicle functions:

- General
- Scheduling
- Custom Fields
- Maintenance

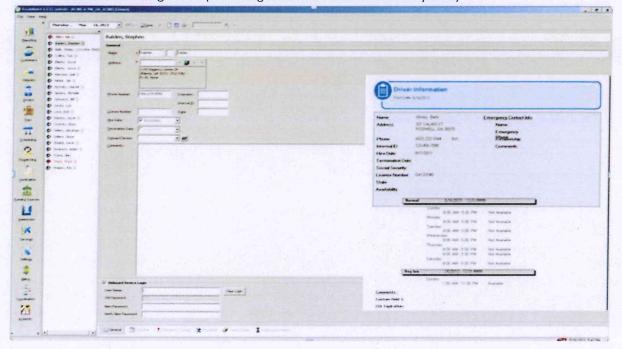

4.3.3 Driver Management Module

RouteMatch provides users with the ability to manage drivers' schedules and availability within the "Driver Management" module. This module manages relevant information associated with each driver or volunteer driver, including general driver information, work schedule, emergency contact, license information, and other relevant data. RouteMatch also provides the ability to add additional driver information using our "Custom Field" capabilities. This allows agencies to capture variable information specific to its objectives, such as testing data, certifications, or training needs.

- General driver information including address, phone, social, internal ID, license information, hire date, and termination date
- Driver capabilities and properties including user-defined properties associated with equipment training, drug and alcohol requirements, and other important data needed to properly manage your drivers
- Holiday availability
- Multiple labor shifts
- Driver/vehicle assignment
- Driver consideration and assignment recommendations
- Driver ranking and priorities based on user defined work rules and constraints
- Employee History
- Mobile Data Assignment (if utilizing RouteMatch Mobile Data System)

4.3.4 Addresses Module

All RouteMatch products integrate GIS technology for address geocoding, route display and analysis, route optimization, vehicle tracking, estimated time of arrival, and schedule automation. Easily manipulate map views with the integrated system map to assist with scheduling and dispatching. Zoom in or out, centre origin and destination locations, control map color-coding. In conjunction with the RouteMatch GeoUtility, edit street and map network data and implement travel zones, corridors, or barriers.

Key features include:

- Rules Based Gecoding Engine that support both Batch and Interactive Geocoding
- Integrated Google Streetview Mapping
- Automated Batch G Automated Batch Geocoding
- Address and Stop Search and Query
- Interactive Geographic Information System and Map Display
- View street names, postal codes, zones, fixed route data, if applicable, and other GIS layers
- Automated Fixed Route Corridor Assignment (if applicable)
- Automated Zone Assignment (if applicable)
- Batch Address Import Support
- Integrate the RouteMatch Notification Module for automated facility and common destination voice, SMS, or email alerts (ie. John Doe will be arriving in 10 Minutes)

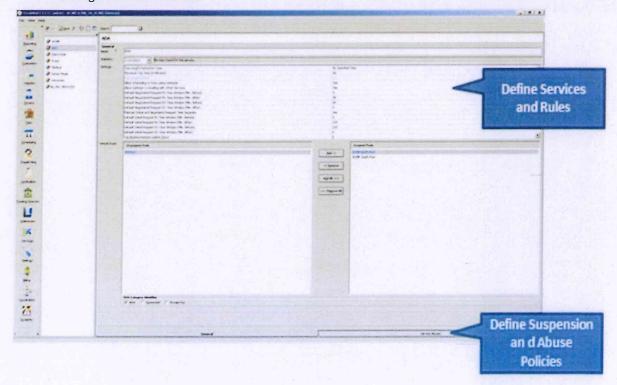

4.4 SETTINGS & CONFIGURATION

4.4.1 Services Module

The Services module allows you to define the settings of the services your agency provides to its customers. You can also assign vehicle pools, view service statistics, and define service abuses in this workspace. The Services Module provides users with the capability of managing multiple programs and services operated by an agency. Vehicle pools or fleets can be assigned to a service to manage transportation services as individual systems, or can be integrated for improved coordination. Business rules and scheduling constraints can be applied to services to ensure the system adheres to customer service and contract requirements. This flexibility allows RouteMatch to support a multiple service delivery organization and integrate services more efficiently. Services allow you to create meaningful distinctions within your RouteMatch system that reflect your agency's operational profile. The services you create allow you to manage each set of trips differently from each other, for whatever purpose you may have.

Key features include:

- Define Services Offered (ie. ADA, Dial A Ride, Fixed, Flexed, Medicaid, etc....)
- Define Service Abuses and Escalation Workflows
- Define Suspension Program and Escalation Workflows
- Define Service Policies and Rules
- View Service Statistics
- Configurable and Flexible

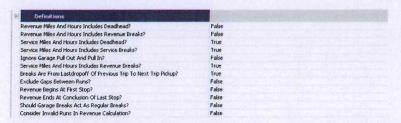

4.4.2 Settings Module

By design and effort, RouteMatch Software solutions have been designed with system and user-configurable components to ensure the deployed product is as flexible and usable as possible. RouteMatch Software wraps around your business processes and workflows. System administrators have access to the Configuration Settings Module to specifically tailor your RouteMatch system to your exact needs. This approach incorporates the concept of scalability and change. As your system grows and changes, our system will grow and change with you. The Settings Module models all base and extensible modules of your RouteMatch system. This includes, but not limited, to the following major system components:

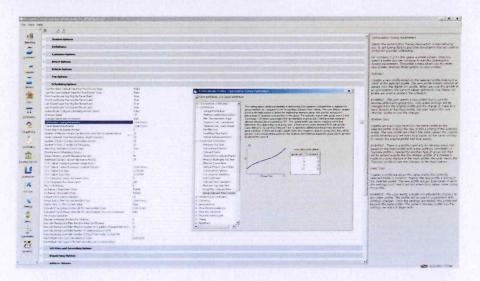

System Options – General settings associated with your organization such as reporting definitions, time zones, user security policies, technical communication settings, and agency specific data..

Definitions – Reporting and data analysis definitions based on your reporting, billing, and data needs.

Schedule and Route Optimization – The foundation of all demand response and transportation management systems, these configurations allow schedule managers to specifically define schedule profiles, RSE tuning parameters, optimization algorithms, speed factors, grouping rules, travel path rules, and many other related schedule and route business parameters.

Module Settings – All base and extensible modules have an integrated configuration management tool built into this module. Custom Fields, business rules, drop down menu items, and graphical user interface customization functions are available in this module.

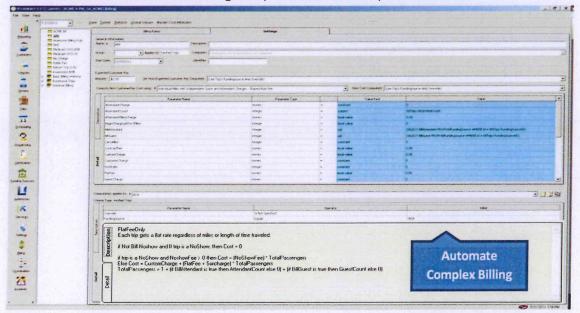

4.4.3 Billing Module

The Billing module allows organizations to model and maintain simple and complex billing rules associated with their services and funding sources. Users can create, edit, and delete billing rules for runs and trips. This module allows you to define the charging parameters of the billing rules and the criteria of their corresponding trips/runs. This allows the RouteMatch Billing Engine (RBE) to automatically determine the cost per trip/run and eliminates the need for assigning billing rules manually when creating a trip request. RBE is an extremely powerful solution to automate your monthly invoicing process and develop very accurate cost allocation models for your planning and operational needs.

Key features include:

- Support stand and user define billing rules and calculations
- Key standard rules include: hours, miles, customer pay, deadhead, group rates, run rates, wait time, shared miles, shared hours, shared miles and hours, shared multi funding source, and many more
- Foundation for a Multi Partner Regionally Coordinated Transportation Model

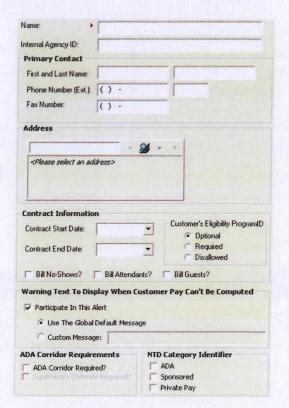

4.4.4 Funding Source Module

Organizations can have multiple funding sources or contracts and these funding sources can have various management applications and impacts to billing, eligibility, and state and federal reporting. The Funding Sources module is used to create, edit, and delete funding sources for your agency. A funding source and its associated billing rule(s) are used when calculating trip cost for a customer. Various funding sources may be entered in this window, which may include insurance companies, health care institutions, or other funding types. At least one billing rule (usually more) must be created for each funding source.

Key features include:

- Create and Edit Funding Source or Contracting Sources
- Define Primary Contact and Address Information
- Define Contract Start and End Dates
- Define Eligibility Requirements
- Define No Show, Attendant, and Guest Billing Rules
- Define ADA Business Rules
- Define National Transit Database (NTD)
 Category Identifiers
- Create and Edit Funding Source or Contracting Sources
- Integrate seamlessly into the RouteMatch Billing Module to accurately calculate complex run or trip costs

5.0 IMPLEMENTATION & TRAINING

RouteMatch Implementation Methodology (RIM)

The RouteMatch Professional Services Organization (PSO) has institutionalized a standard proven pragmatic and adaptable implementation methodology that capitalizes on our collective experience with Go Lives at over 600 locations across the USA. This internally developed methodology RIM (RouteMatch Implementation Methodology), has evolved through the hundreds of installations that we have completed. RIM takes into account the proper staffing to meet the client's timelines and the proper procedures and documentation results in a successful implementation of our systems. RIM fundamentals include teamwork, structured client involvement, discrete, flexible stages with concrete deliverables.

Specifically, RIM adds value to a project by:

- Institutionalizing best practices refined through over 600 client implementations
- Defining guidelines for setting roles and responsibilities of both client and project team
- Providing a road map to assist in scheduling and resource planning,
- Standardizing methods in order to assure accuracy and consistency,
- Implementing a systematic, proactive approach to project management,
- Flexibility that enables our staff to tailor the stages and focus energy, time, and expertise where they are most needed,
- Increasing visibility to critical path items and key milestones
- Integrating feedback loops/reviews into the implementation process to drive organizational learning, and
- Ensuring successful communications with clients project team

The below outlines RouteMatch's approach and the associated services for the implementation of a Demand Response Management and Mobile Data system for Mendocino Transit Authority. This approach is built around the 3 core teams of RouteMatch's PSO:

- Project Management Office provides project management and design expertise
- Technical Services provided engineering and installation expertise
- Educational Services provide expertise in adult education of complex transit systems

Refined through more than 600 installations, our technology and implementation expertise ensures that our customers' requirements, timelines, and budgets are met with minimal interruptions and maximum optimization. An implementation team will be assigned from our experienced PSO team which has over 30 employees dedicated to the implementation of our products, with experience ranging from 3 years to 15+ years in implementations. Our PSO group consists of project managers, business consultants, training consultants and technical personnel devoted to assisting customers in all phases.

As illustrated in Figure X, the stages and components of the RouteMatch Software RIM approach include:

- Phase 0: Project Initiation A structured transition from contract award to project kickoff.
- Phase 1: Design Determines the details required to implement RouteMatch Software' solutions in the client's environment.
- Phase 2: Build Software and hardware install, configuration, and Vendor Assembly Testing;
 prepares the project teams for operation in the client's environment.
- **Phase 3: Educate** End to End system overviews ensures knowledge share of the updated operational inputs and outputs including end user training in distinct levels of training.
- Phase 4: Deployment Integration, regression and user acceptance testing; confirms the solutions ability to execute a production environment in the client's current IT environment.
 Integrates the system and operations in a production environment for the client. Includes Go Live.
- Phase 5: System Acceptance Happens once the client is fully operational and ready for transition to customer support. Transition to RouteMatch's Customer Support Organization (CSO)
- Project Management Occurs throughout all phases to ensure project goals, objectives, timeline and budget are being met and communications are clearly executed.
- Account Management Ensures customer satisfaction is maintained over course of entire
 project, and that transition into RouteMatch's Customer Support Organization (software
 maintenance) is successful through meeting all project objectives.
- Executive Sponsorship Aligns the project's objectives to RouteMatch's corporate goals to
 ensure that client satisfaction and return on investment meet organizational expectations for all
 parties.

Figure X: RouteMatch Software's RIM Approach

Testing Approach

Our testing strategy for the various components of Vendor Assembly Testing and later in the project lifecycle is based on best practices for software testing and we view testing more than just debugging. Testing is not only used to locate defects and correct them. It is also used in validation, verification process, and reliability measurement with our clients as part of our implementations. Testing is involved in every stage of the software life cycle at RouteMatch, from a Professional Services implementation perspective the spectrum of testing incorporates 4 major phases of testing:

- **Unit Testing** is executed at a low level of the software. The implementation team tests our basic components of software being utilized for the project.
- Integration Testing is performed against the functional flow and operational process for the client and will include hardware peripherals
- System Testing affirms the end-to-end quality of the entire system. The System test is based on the functional/requirement specification of the system. Non-functional quality attributes, such as reliability, security, and maintainability, are also validated.
- User Acceptance Testing is executed when the completed system is handed over from RouteMatch to our customers. The priority of acceptance testing is rather to give confidence that the system is working than to find errors. RouteMatch team members will monitor and record UAT activities as they are completed by City representatives.

Training

RouteMatch realizes that proper training is crucial to a successful project. As outlined in the RIM Approach, all clients are provided with a custom training plan developed by assessing their specific training needs. This type of instruction is called Role Based Training. RouteMatch's Project Manager and Educational Services Manager are able to develop this custom plan by conducting a thorough training needs assessment, listening carefully to Gold Coast Transit's requirements and wishes. With open communication, the RouteMatch Team then draws on their experience and the findings to develop a custom training plan. This Training Plan is then reviewed and agreed upon by all parties before the start of training.

Role based training has been proven to increase efficiency in training and is a more effective way of learning than having all Users learn aspects of the application that do not apply to them. By avoiding generic training and focusing on an individual's roles and responsibilities, RouteMatch effectively prepares each employee with the skills needed to be successful in a desired role. RouteMatch will provide training for staff to operate, administer, troubleshoot, and maintain the solution. The training will be led by an experienced RouteMatch Educational Services Consultant. RouteMatch only requires that the training room be large enough to fit the training class and recommends each Trainee have their own workstation that is networked to the RouteMatch server.

RouteMatch believes in open class participation and that practice is key to learning. Therefore, the training consists of Users learning and actively practicing to use the applications in a hands-on

environment, working with real, local data. This learning-by-doing approach has been shown to be a more effective method of training and provide more significant effects on user adoption and the overall success of the implementation. In addition to exceptional onsite client training, both hard copy and electronic documentation of User Guides, Training Guides, and exercise books for each corresponding module of RouteMatch will be provided to Users on the modules they will be trained on. This estimate below is based on RouteMatch's previous experience training similar agencies. The will include training courses for both technical and non-technical staff including, but not limited to:

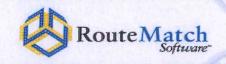

- Dispatchers
- Vehicle Operators
- System Administrators
- Management
- Maintenance Technicians

Continuing Education

Continuing education is an integral part of the RouteMatch Customer Support Program. We provide basic training on an as needed basis through our Tier 1 Customer Support Representatives. We provide more specialized, enhanced training through the Educational Services department of RouteMatch provides comprehensive continuing education through several methods and deliver options, as follows:

- Training Webinars These are on-line, regularly scheduled training classes designed and developed by RouteMatch and offered to the public. Notice of these Training Webinars is provided through emails and on our website.
- Individualized On-line Training Sessions RouteMatch Customers are entitled to up to 5 on-line training sessions each year free of charge. These are training sessions designed by the Customer and RouteMatch together and intended to address specific needs of the agency.
- RouteMatch In-the-Field Periodically RouteMatch Customer Support personnel will go on the
 road to visit clients locally. These sessions generally occur in a location central to a specific
 region and involve one-on-one, face-to-face customer support and training for each agency.
 RouteMatch personnel will set up a consulting room with each customer's database and
 dedicate 2 3 hours of time for each agency's needs. This event is generally used for
 troubleshooting and general education.

6.0 TOTAL SUPPORT & MAINTENANCE

The RouteMatch offers post-implementation warrenty and support through its Client Services Operation department. This department includes 25 consultants and IT professionals working in the following divisions:

- Tier 1 Tier 1 staff consists of IT and/or Transit professionals with 1 2 years prior experience.
 They are the "front line" contact point for all Customer Support needs. They man our telephone and email case queues and provide training, configuration services, technical assistance, and case processing. Tier 1 staff is responsible for tracking all cases and communicating efforts, resolution plans, and timelines to our customers.
- Tier 2 Tier 2 staff are IT and/or Transit Professionals with at least 3 years of prior experience
 who have specific skill sets tied to more complex matters such as database management, report
 writing, scheduling engines, real time arrival, transit operations, and billing. Tier 2 staff receives
 cases from the Tier 1 team and work with customers to resolve issues. Tier 2 staff also works
 directly with software developers and our Product Management team to process and handle
 matters.
- Educational Services Educational Service staff members are training professionals with at least 3 years experience in IT or Transit. These professionals are experts in the use of RouteMatch Software and are trained to identify training needs, develop training programs; and to deliver both individual and classroom based training. The Educational Services division provides training "on demand" for more complex issues and otherwise creates and delivers specific training curriculums as requested and needed as well as routine, general Training Webinars for the general customer population to attend.
- Upgrade Services Upgrade Services consists of former Implementation Consultants and Tier 2 support staff who are tasked specifically with delivering upgrades to current clients. Their expertise and efforts include version configurations, data and report migrations, training, operations assessments, and hardware configuration. The upgrade services team is also trained in project management so as to insure seamless transitions to new versions.
- Transit ITS Consulting / Complex Account Management RouteMatch has a team of senior Customer Support Representatives and former Implementation Consultants who are tasked with providing on-going, post implementation consulting services. These services include operations assessments; specific and detailed training on complex software functions such as automated scheduling and billing, and reporting, as well as overall complex account management. Their efforts include weekly project status meetings, issue log reporting, and on-site visits when needed. It also includes carrying out our RouteMatch In-the-Field™ program where we travel to certain locations central to our clients and provide face-to-face customer support and consulting.

Each department operates in conjunction with the others and manages their efforts and information in one consolidated Customer Relations and Support database. The entire department meets bi-weekly to discuss activities and issues to insure that all clients are receiving the most comprehensive and efficient support imaginable.

Accessing Support

Customers are able to report issues by phone, email, or website.

- Phone We offer toll free phone access which feeds into a call-center staffed from 24 / 7. Two "On-call" staff members are then connected to the phone system after regular business hours and handle all calls from 8:00PM until 6:00AM. All staff members are equipped with BlackBerry hand held units and are informed of all calls coming in during the "on-call" hours.
- Email Customers are also provided with the option to contact Customer Support through a
 general email address support@routematch.com. All members of the Customer Support Team
 receive these emails and are available for support. Tier 1 staff members are primarily
 responsible for handling these emails and the "on-call" staff are required to ensure the emails
 are handled in a timely manner.
- Website RouteMatch provides a "customers only" web portal which provides Customers with
 access to the status of their current cases. It also allows them to "log" an issue which is sent to
 the Tier 1 Customer Support team for processing.

Response Time

RouteMatch Customer Support Representatives are required to respond to all issues logged within in two (2) hours. The average response time is less than 15 minutes. All cases are "triaged" based upon the urgency of the issue and severe cases are handled immediately. The prioritization and ultimate response time is determined by a Business Process Impact (BPI) assessment performed as the time a case is communicated to the team. Issues are assigned one of the following "severity" ratings:

- Showstopper Customer cannot access or use the Software.
- Urgent Customer cannot effectively operate a significant, material function in the software which is immediately affecting their "daily" business processes.
- High Customer cannot effectively operate a function of the software which will affect their daily business processes or is immediately affecting their less than daily but routine business processes.
- Low Customer cannot effectively perform any type of process as designed to be used or otherwise needs assistance.

All types of cases are responded to using commercially reasonable and dictated response times based upon the severity rating. The team is properly staffed so as to avoid any issue taking more than 2 hours for a response.

Documentation Updates

RouteMatch produces new versions of its training and users manuals with all new versions (Upgrades). All Updates and Hot-fixes are documented in release notes and are provided as supplements to the manuals. All manuals are delivered in hardcopy and within the Software through an "On-line" help file. They are made available through the Customer Support portal on the RouteMatch website and are delivered to individual agencies and users as requested. Notices are sent to all clients as the documents become available.

Modifications, Upgrades & Enhancements

RouteMatch maintains its Software primarily through Upgrades and Updates. On occasion we will deliver important or urgent items through "Hot Fixes" or database script releases. Each is implemented by or with the assistance of a qualified RouteMatch staff member and can be delivered remotely, "on-line". Each type of release is defined as follows:

- Upgrade means and refers to major changes or to a new release of the Software, including any
 new major release of the Software. Upgrades to the Software are normally indicated by
 incremental numeric changes as "1" whole units (i.e. release 1.0 to 2.0).
- Update refers to fixes and minor changes to the Software, which are indicated by internal, incremental numeric changes smaller than "1" unit (i.e. release 1.1 to 1.2).
- Hotfix refers to specific minor changes to a specific aspect of the software which are indicated by incremental letter changes at the end of the version number (i.e. release 1.1a to 1.1b).

Policy for Providing Releases

 All Upgrade, Updates, and Hotfixes are provided free of charge as they are made Generally Available.
